#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
   The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 5-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 5-10, numerous equations have been specified in the claims. However, each and every term in the equations has not been defined.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Application/Control Number: 09/972,407

Art Unit: 2644

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1-4, 11-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kohashi et al (US 4,586,194) in view of Birck et al (US 5,386,475).

Regarding claims 1-3 and 11-16, Kohashi et al (hereafter Kohashi) shows the steps of applying a testing signal, inserting a first attenuation (the attenuation is always present in the system), measuring the first output (Pu(t))), calculating a first transfer function (Pu( $\omega$ )), inserting a second attenuation (the second attenuation is always present in the system), measuring the second output ((Pv(t)), calculating a second transfer function (Pv(ω)), combining the first and second transfer functions (Hc) and calculating a sound pressure level emitting by the transducer (by using Gv, the sound pressure level is calculated). Kohashi fails to explicitly disclose the nature of the impulse generator. Since Kohashi teaches a testing and measuring device using a general signal generator, one skilled in the art would have expected that almost any one could be used, as long as the nature of the signal will not damage the hearing of the tester. Birck et al (hereafter Birck) teaches a measuring device for hearing using broadband test signal (col. 3, line 53). Thus, it would have been obvious to one of ordinary skill in the art to modify Kohashi's method by using the broadband signal as taught in Birck in order to generate a testing signal.

Regarding claim 4, although not clearly shown, the first transfer function ( $Pu(\omega)$ ) and the second transfer function ( $Pv(\omega)$ ) includes amplifier transfer function, attenuator

Art Unit: 2644

transfer function, an electrical-to-acoustic transfer function and an acoustic-to-electrical transfer function.

## Allowable Subject Matter

- 6. Claims 5-10 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ping Lee whose telephone number is 703-305-4865. The examiner can normally be reached on Monday and Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Forester W Isen can be reached on 703-305-4386. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
